

Mercury & Gemini Banner Stand Template

Visible banner size:

31.5" x 83"

Total banner size:

31.5" x 84.5"
(includes bleed area)

This template is created to the size of the banner. The area that will be visible when the stand is set up is above the Bleed area. Do not change the size of this document.

You may pull bleeds on the top and two sides 1/4", use the entire 1" bleed area at the bottom.

When your design is finalized please convert all fonts to outlines so we will not have any font problems.

Raster art placed in this file at 100% should be between 100 and 150 dpi. Art less than 72 dpi at the output size may result in decreased image quality.

Do not use Pantone Spot colors as these banners are printed using a process build. We suggest all color picking be done using a Pantone Color Bridge which shows Pantone Spot colors and their nearest process color. Using Spot colors will probably result in unpredictable colors.

All of this layout information is located on the layer named "Template". Please place all of the art on the "Art" layer.
